Specification Page 21 - Amended with Underlining And Strikethroughs

to each other are selected. This is in order These purposes are to prevent thermal deterioration of the material due to excessive heating during heat sealing and to achieve an improvement in operational efficiency.

There are no particular limitations for the bundling 40 constituting the bundling portion of portion filaments 30 regarding the place, configuration, and number thereof. For example, when connecting together impregnated with adhesive, filaments 30 the bundling portion 40 has a predetermined width. In the case of connection by heat sealing, the linear bundling portion 40 generally provided in a direction crossing However, there is no need for all the filaments filaments. constituting the filament bundling body 30 31 integrally connected by one bundling portion 40; it is also possible for the whole to be connected by two or more bundling portions 40. is, long That as as all the filaments 30 are connected with any of the other filaments 30 and not separated from the filament bundling body 31, bundling portion 40 the may be, for example, of a construction in which a plurality of short linear segmentlike bundling portions crossing the filaments 30

provided in a zigzag fashion.

Fig. 6 is an exploded perspective view of a cleaning device according to a second embodiment of the present invention. Reference numeral 6 indicates a base material sheet, reference numeral 20 indicates a main cleaning portion, and reference numeral 50 indicates an adhesive. A large number of filaments 30 aligned in the fiber
